

# **Project APSOS** **(Atmospheric Profiling Synthetic** **Observation System)** **Progress & Plans**

**Daren Lyu, Weilin Pan , Yuejian Xuan, Yinan Wang**

**(Institute of Atmospheric Physics, Chinese Academy of Sciences)**

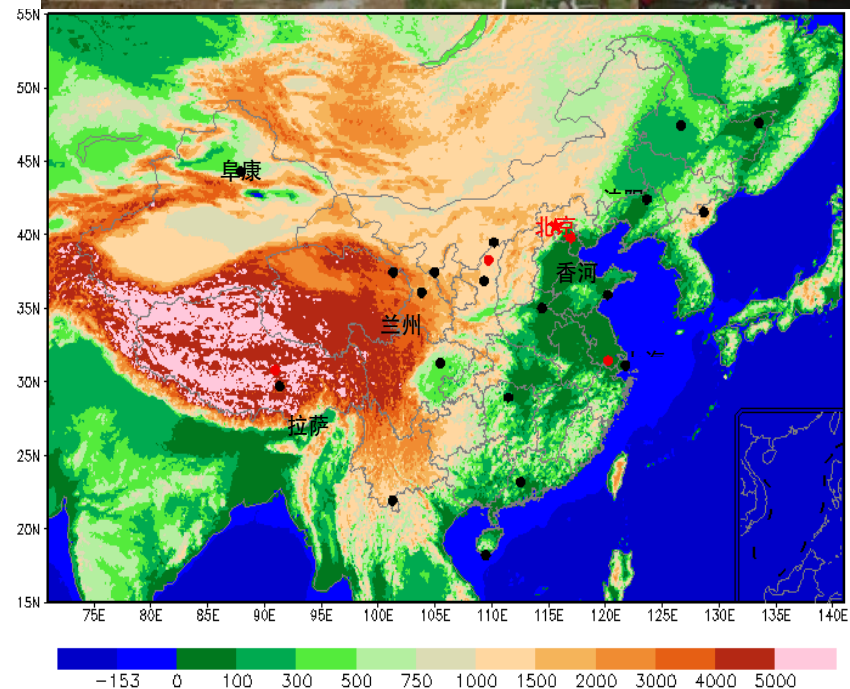

**Shunsheng Gong, Faquan Li, Wei Gong, Tao Li, Shunxing Hu, Zhonghui Gao, Qijun Yao**

**(APSOS Team)**

# Outline

- Scientific Motivation
- Key Instruments
- Recent Progress
- Upcoming Campaigns
- Future Plans

# Scientific Motivations

- **The challenges:**  
to understand the **Dynamics-Physics-Chemistry** processes  
and the **driving forces in the whole (neutral) atmosphere**
- **Measurement goals:**
  - neutral atmosphere: **0 ~ 110 km**
  - multi-parameters
  - high **vertical resolution**:  $10^1 \sim 10^2$  m
  - high **temporal resolution**:  $10^0 \sim 10^1$  min
  - **variability** (diurnal, seasonal, inter-annual, special events)
  - extend to **global, regional, and local** coverage
  - **ground-based and space-borne**

# Capabilities of APSOS

# APSOS Team

- **Institute of Atmospheric Physics  
Chinese Academy of Sciences  
PI: Daren Lu  
co-I: Weilin Pan**

- **Wuhan Institute of Physics & Mathematics  
Chinese Academy of Sciences  
co-I: Faquan Li**

- **University of Science and Technology of China  
co-I: Tao Li**

# APSOS Team

- **Anhui Institute of Optics & Fine Mechanics  
Chinese Academy of Sciences  
co-I: Shunxing Hu**
- **Wuhan University  
co-I: Wei Gong**

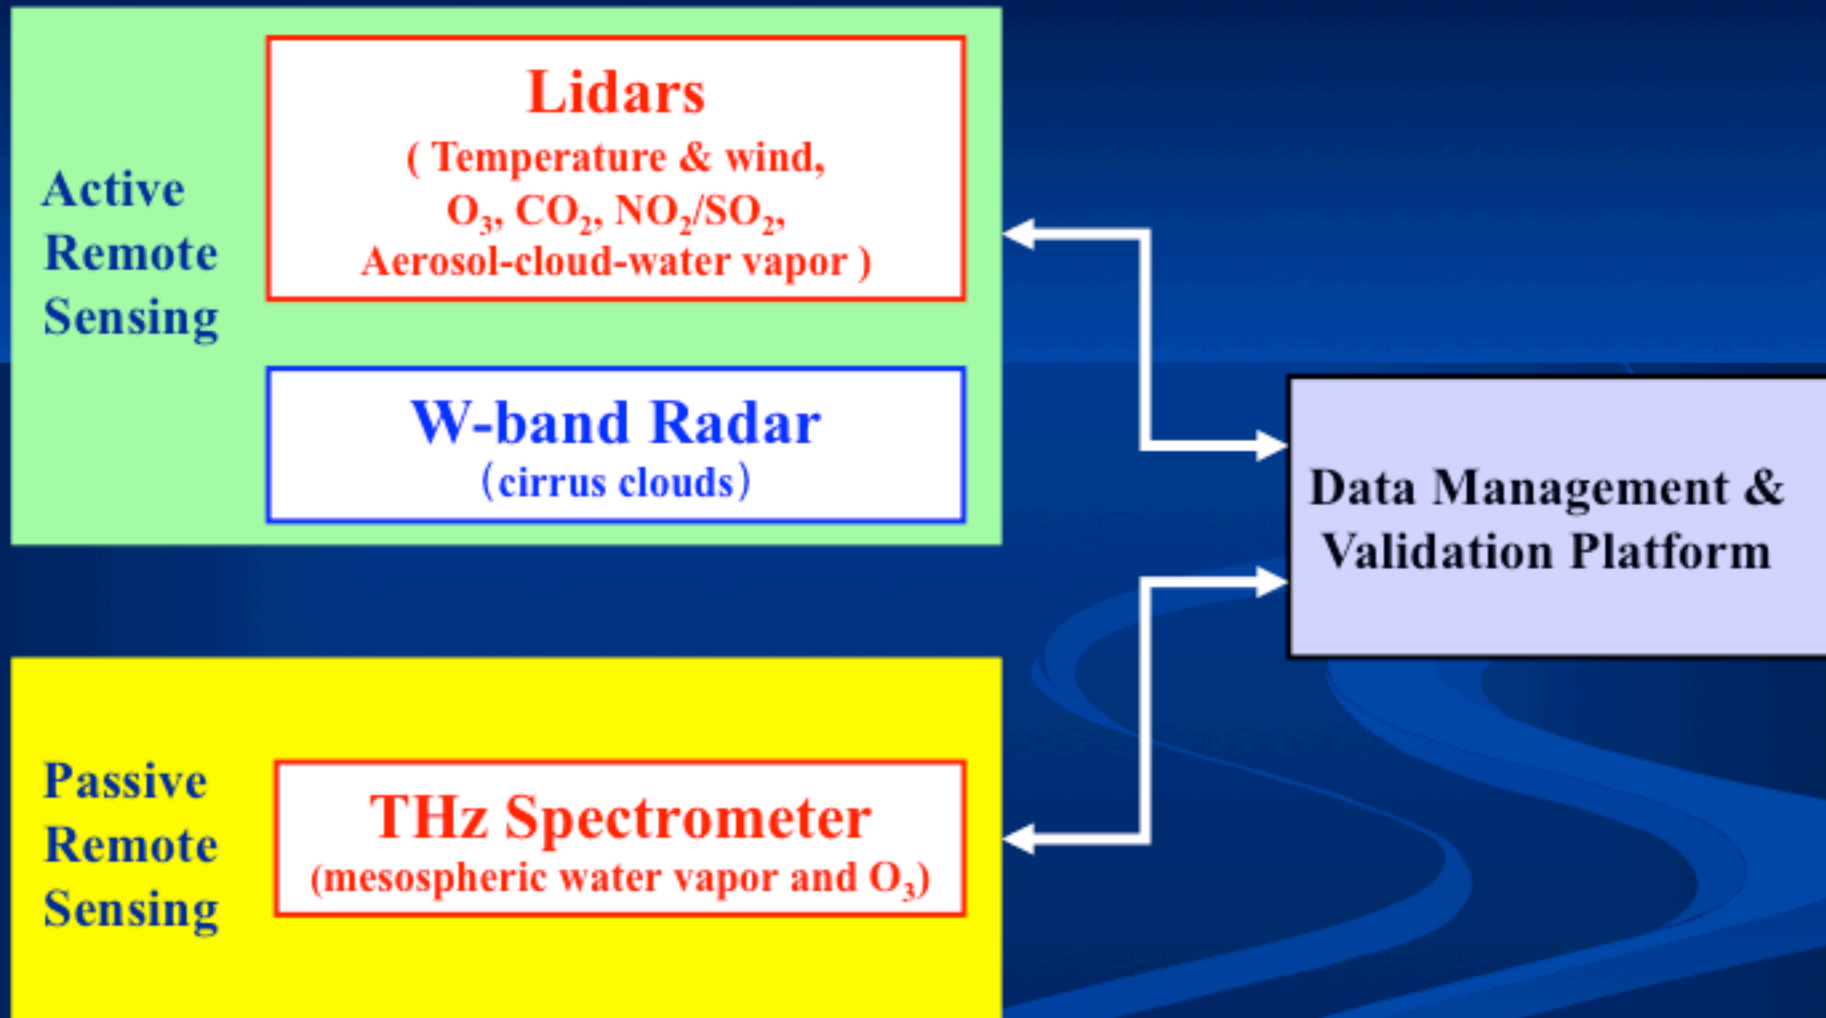

- **Purple Mountain Observatory  
Chinese Academy of Sciences  
co-I: Qijun Yao**
- **Anhui Sun Create Electronics  
co-I: Zhonghui Gao**

# Project Objectives

- To obtain the **vertical profiles** of atmospheric temperature and wind, greenhouse gases, pollution gases, clouds, aerosol, and water vapor;
- To characterize the **greenhouse effects** (warming in the lower atmosphere, and cooling in the upper atmosphere);
- To understand the two transition regions:
  - Upper Troposphere – Lower Stratosphere (**UT-LS**)
  - Mesopause and Lower Thermosphere (**MLT**)
- To provide ground-based measurements for **satellite data calibration & validation**;
- To monitor the **solar activities**, the **cosmic rays**, and their interactions with the Earth's atmosphere.

# APSOS System

# APSOS Performance - Lidars

Detecting Target	Operating Wavelength	Sounding Level	Precision
Temperature, Wind	532nm 589nm	Temperature: 5-110km Wind: 10-40km, 80-110km	Temperature: <1K @ near surface, <3K @ 30km, <10K @ 50km, <4K @ 90km Wind: <3m/s @ 10km, <6m/s @ 40km, <4m/s @ 90km
O <sub>3</sub>	289.1 nm, 299.1nm, 308nm, 355nm	5~50km	<20% @ 5~40km <30% @40~50km
NO <sub>2</sub> ,SO <sub>2</sub>	446.6nm,448.1nm (NO <sub>2</sub> ), 300.05nm,301.5nm (SO <sub>2</sub> )	0.1~3km (night) scanning (orientation 0~360°, pitch 0~90°)	5ppb NO <sub>2</sub> 2ppb SO <sub>2</sub>
CO <sub>2</sub>	1572nm	0.1~3km	<5%(night)
Aerosol, Cloud, Water Vapor	1064nm, 532nm, 355nm	Aerosol (near surface~30km) Cloud (near surface~18km) Water Vapor (near surface ~12km)	back-scattering ratio<20% water vapor<10% @ 5km water vapor<30% @12km

# APSOS Performance - W-band Radar & THz spectrometer

## W-band Cloud Radar

Detecting Target	Operating Frequency	Sounding Level	Polarization Mode
Cloud( reflectivity, radial velocity, spectral width, depolarization)	94-95GHz	0.2-20km	Emitting horizontal linear polarization, receiving horizontal and vertical polarization

## THz Spectrometer

Detecting Target	Operating Frequency	Sounding Level	Spectral Resolution
H <sub>2</sub> O, O <sub>3</sub> , CO, N <sub>2</sub> O	325~380 GHz (Low), 448~488 GHz (High)	Mesosphere	<200K (Low frequency) <250K (High frequency))
