GDAP Mission

Core Mission

• Sponsor **production and analysis** of satellite datasets (e.g. ISCCP, GPCP, SeaFlux, LandFlux)
• Oversee **dataset assessments** to provide critical uncertainty information for data records
  • Assess adequacy of current observing systems and identify gaps/future needs
• Support **ground based networks** (e.g. BSRN, GPCC)
• Act as an **interface** between GEWEX activities and datasets
  • PROES, GAP, GEWEX panels
  • New Earth’s Energy Imbalance initiative
• Represent GEWEX at various WCRP meetings, WMO, and other requests
  • Outreach to various other bodies within WCRP
  • Strong links to WMO/CGMS working groups
    • GVAP meets during ITGW
    • co-chair of ICWG is a member of GDAP
    • Joint IPWG/Assessment
• Rémy Roca sits in WDAC
• Coordination with GCOS (although it needs improvement)
The GDAP Activities Portfolio

Panel members
Rémy Roca, chair
Tristan L’Ecuyer, vice-chair
Wouter Dorigo
Andrew Heidinger
Seiji Kato
Christian Kummerow
Hirohiko Masunaga
Isabel Trigo
Claudia Stubenrauch
Tianjun Zhou

William Rossow, Founder
Joint with CONCEPT-HEAT meeting
Hosted by K. Threnberth at NCAR facility. Very nice setting and local support from Kevin!
• 2 days of very busy meeting
• Half a day of GDAP centered discussion with only the panel members

All usual activity + new presentations (LST; OHC from Alimetry-GRACE ; TWS )

Next meeting in late Nov 2018 in Portugal hosted by Isabel Trigo
CORE Activity: data production

Continuing a Key Climate Data Record: ISCCP-Next Generation

- Cloud properties constitute a core geophysical climate record
- Instruments and expertise exist to generate a calibrated, global, 10-channel, multi-parameter cloud at 3 km with 30 minute coverage
  - Heritage to deal with such data volumes also exists (e.g. AIRS and MODIS)
- Excellent opportunity for coordinated NASA and NOAA activity to maximize scientific benefits of new geostationary and low-earth orbiting satellites
- GDAP endorses the formation of a team to develop a unified analysis approach built around the current geostationary radiance data record augmented by MODIS/VIIRS and sounder cloud information
  - Agency support for a series of international workshops
  - Target 2021 for initial implementation
- A multi-institutional (multi-national) processing chain similar to ISCCP is encouraged
  - Individual satellite operators, collect, quality control, and sub-sample radiances and provide these data to an analysis center that would conduct a refined calibration and the quantitative cloud analysis.
  - Data products to be archived and distributed by existing data centers.
CORE Activity: assessments

Application-centric approaches are key to maximize value of assessments

- Recently completed GDAP Water Vapor assessment used to draft recommendation in the new Decadal Strategy
- Updated cloud assessment with improved representation of active sensor observations is nearing completion
- Aerosol assessment is being resurrected
- Joint IPWG-GEWEX Precipitation Assessment is now underway
  - Specific attention to « high priority » regimes (arid, orographic, high-latitude)
  - Established links to GASS, GHP, GAP, etc. and modeling communities
  - Representation from NASA PMM, NOAA, JAXA, and European communities
  - Seeking agency support for comprehensive activity
- GDAP promotes a new comprehensive view on assessment
  - Document on good practices to be finalized this year

One more chapter of the assessment: Extremes

- Joint GC Extremes / GDAP meeting in July in Germany (invitation only)
- Contribute to the assessment
- Contribute to the good practices document
- Prepare for informing IPCC chapter

Bridge to the remote sensing community
CORE Activity Message 2:

Ground-based networks are vital to uncertainty characterization

- E.g. BSRN
  - Critical reference for SRB
  - New SI-traceable reference for downwelling LW irradiance being established
  - Recommend adding 2m temperature to standard BSRN observations suites
  - Workshop to define accuracy standards for buoy sites
  - BSRN chief Chuck Long is stepping down
    - Replacement search underway – goal to announce successor in July (short time)
- New feasibility study for a regional land surface energy balance/water cycle closure assessment centered on a DOE ARM site
A New GDAP Vision
Consistency as a way of life

An integrated approach to energy-water-mass consistency based on refined uncertainty characterization

Recent Advances from Satellite Gravimetry and Altimetry Measurements

- Sea level (from satellite altimetry) minus ocean mass (from space gravimetry) provides a satellite-based alternative to Argo for estimating OHC.

- The current best estimate of the OHC change from satellite is $0.7 \pm 0.5 \text{ Wm}^{-2}$ over 2005-2013.

- GDAP endorses expansion of this activity to regional and shorter timescales as part of a new EEI-themed energy budget assessment.
Overall goal:
Strengthen and extend the synergy community on the Earth’s energy imbalance aiming to discuss cross-links between the different WCRP core programs, in particular between CLIVAR and GEWEX, but also including CliC.

Expected outcomes:
The workshop will identify research goals and opportunities on the Earth’s energy imbalance, and synthesize and focus the various aspects across WCRP. A main outcome may include the discussion and reporting on how the CONCEPT-HEAT activity could evolve into a WCRP topic.
