

# New Insights into Increased Seasonal to Interannual Water Cycle Variability Across the Great Plains

Jeffrey B. Basara

Associate Professor, School of Meteorology

Director of Research, Oklahoma Climate Survey

Director, Kessler Atmospheric and Ecological Field Station

University of Oklahoma

GEWEX Open Science Conference:

Extremes and Water on the Edge

Canmore, Alberta, Canada

8 May 2018

# Acknowledgments

## Co-authors and Collaborators:

# Historical Droughts in Oklahoma

Basara, J. B., J. N. Maybourn, C. M. Peirano, J. E. Tate, P. J. Brown, J. D. Hoey, and B. R. Smith, 2013: Drought and associated impacts in the Great Plains of the United States – A review. *International Journal of Geosciences*, 4, 72-81.

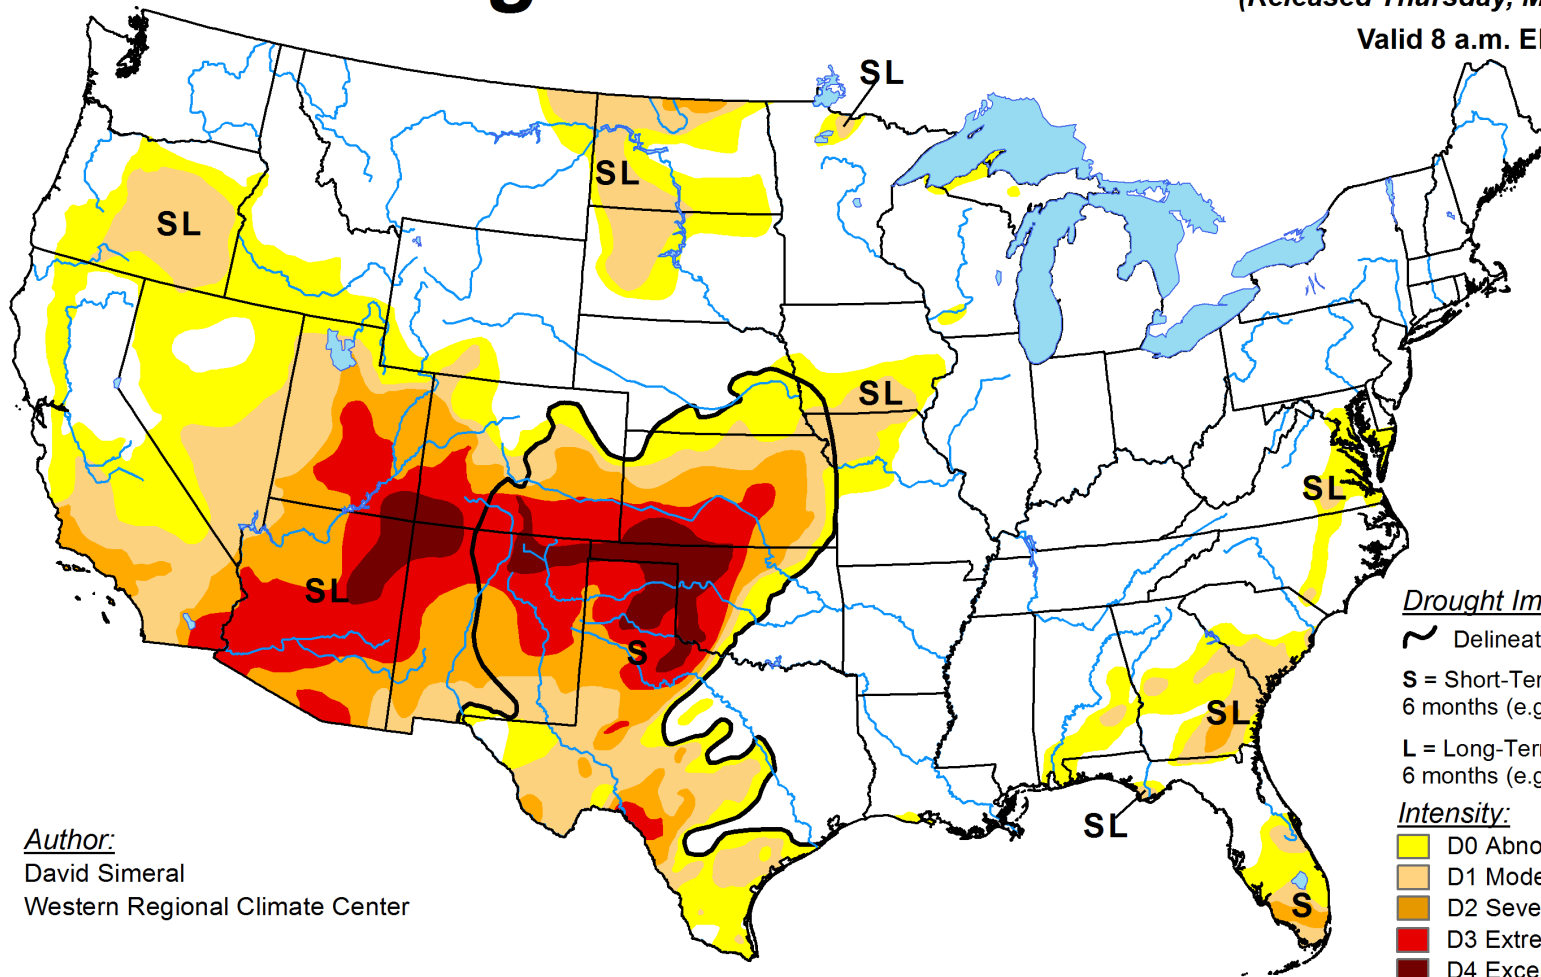

# U.S. Drought Monitor

May 1, 2018

(Released Thursday, May. 3, 2018)

Valid 8 a.m. EDT

*Author:*  
David Simeral  
Western Regional Climate Center

### Drought Impact Types:

- Delineates dominant impacts
- S** = Short-Term, typically less than 6 months (e.g. agriculture, grasslands)
- L** = Long-Term, typically greater than 6 months (e.g. hydrology, ecology)

### Intensity:

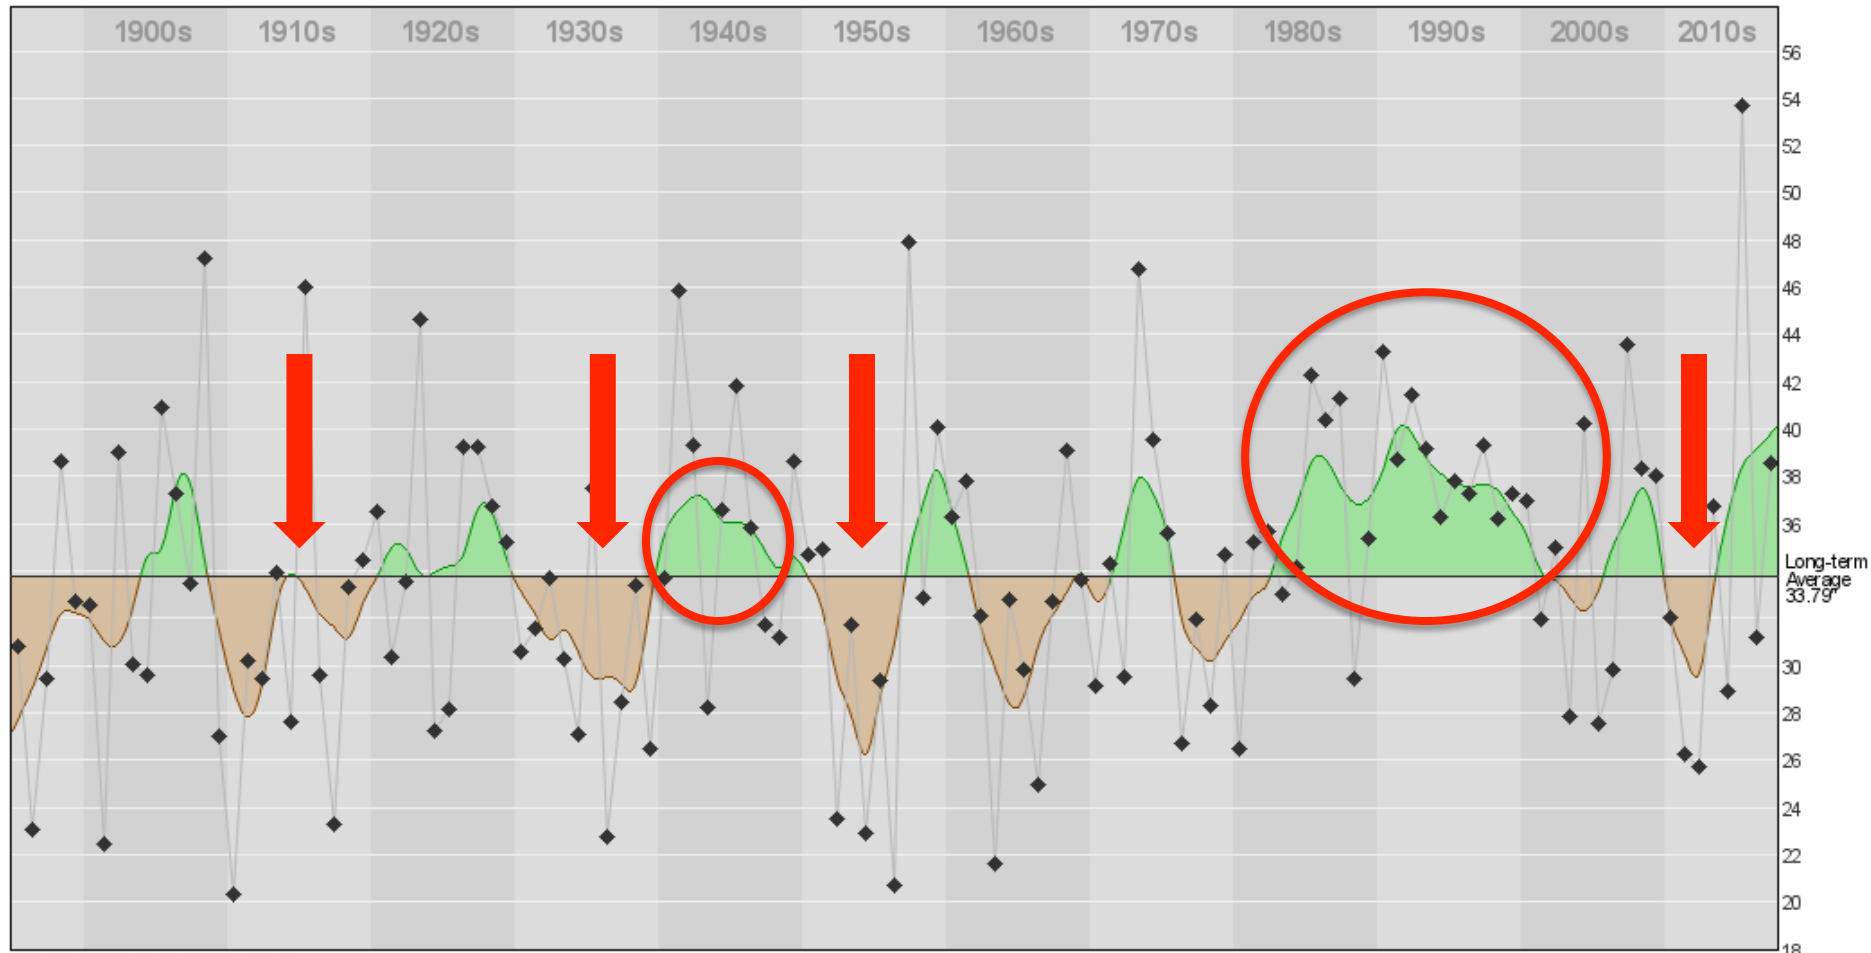

- D0 Abnormally Dry
- D1 Moderate Drought
- D2 Severe Drought
- D3 Extreme Drought
- D4 Exceptional Drought

The Drought Monitor focuses on broad-scale conditions. Local conditions may vary. See accompanying text summary for forecast statements.

# Historical Droughts (and Pluvials) in Oklahoma

**OKLAHOMA CLIMATOLOGICAL SURVEY** Annual Precipitation History with 5-year Tendencies  
 OK-CD5 (5-Central): 1895-2016

■ Wetter periods  
■ Drier periods  
◆ Annual precipitation value

Long-term Average  
34.19"

# Dipole Transitions

Christian J., K. Christian, and J. B. Basara, 2015: Drought and Pluvial Dipole Events within the Great Plains of the United States. *J. Appl. Meteor. Climatol.*, **54**, 1886–1898.

- A pair of equal and opposite electric charges or magnetic poles of opposite sign separated especially by a small distance.
- An abrupt year-to-year transition from drought to pluvial (flood).
- Able to erase multi-year droughts in a matter of months.

Probability of a significant drought year followed by a pluvial year:

- SGP: 25%
- NGP: 25%
- HP: 16%

# Impacts of Dipole Precipitation

Precipitation Observations from the WASH Oklahoma Mesonet site.

**October 2014**

**May 2015**

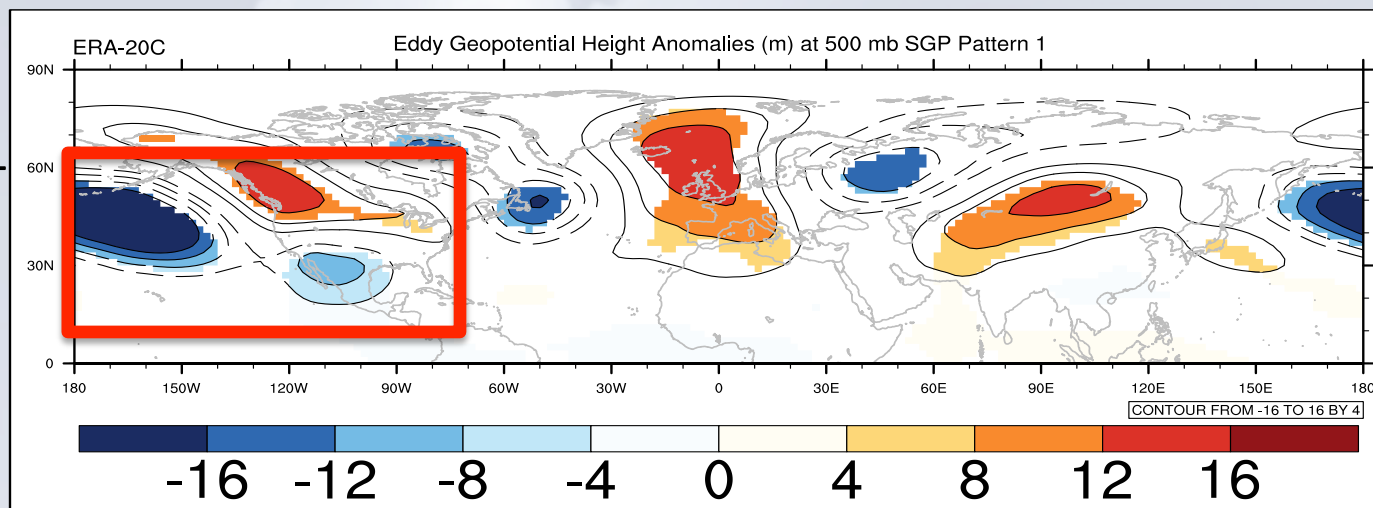

# SGP Pluvial Year Atmospheric Pattern

Flanagan, P., J. Basara, J. Furtado, and X. Xiao, 2018: Primary Atmospheric Drivers of Pluvial Years in the United States Great Plains. *J. Hydrometeor.*, **19**, 643–658.

Eddy Geopotential Height anomalies

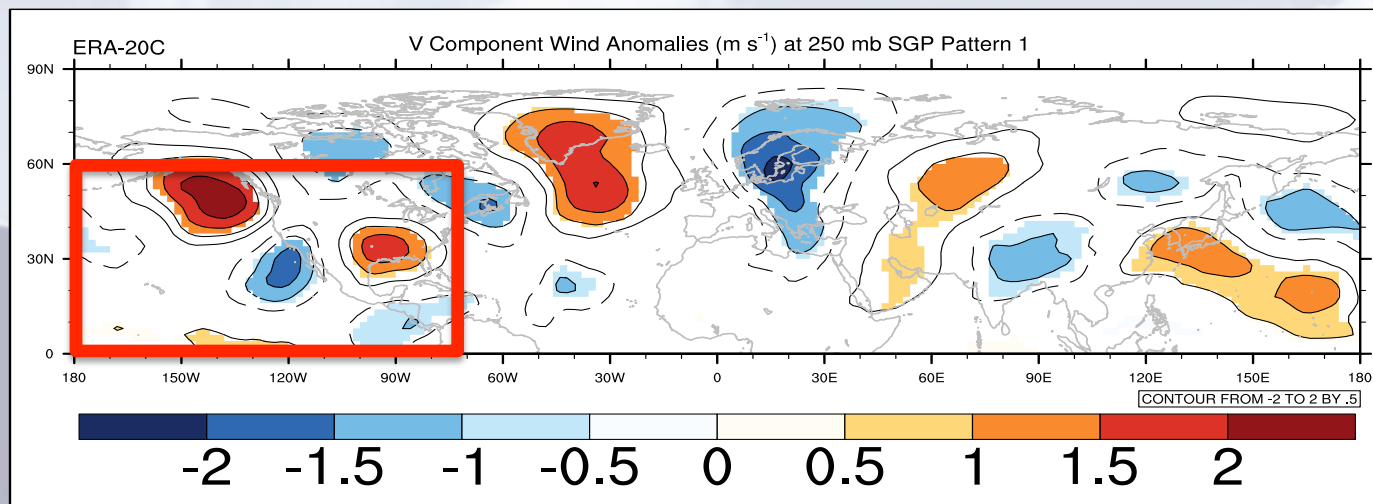

Shows wave features that are separate from the mean flow.

ERA-20C dataset

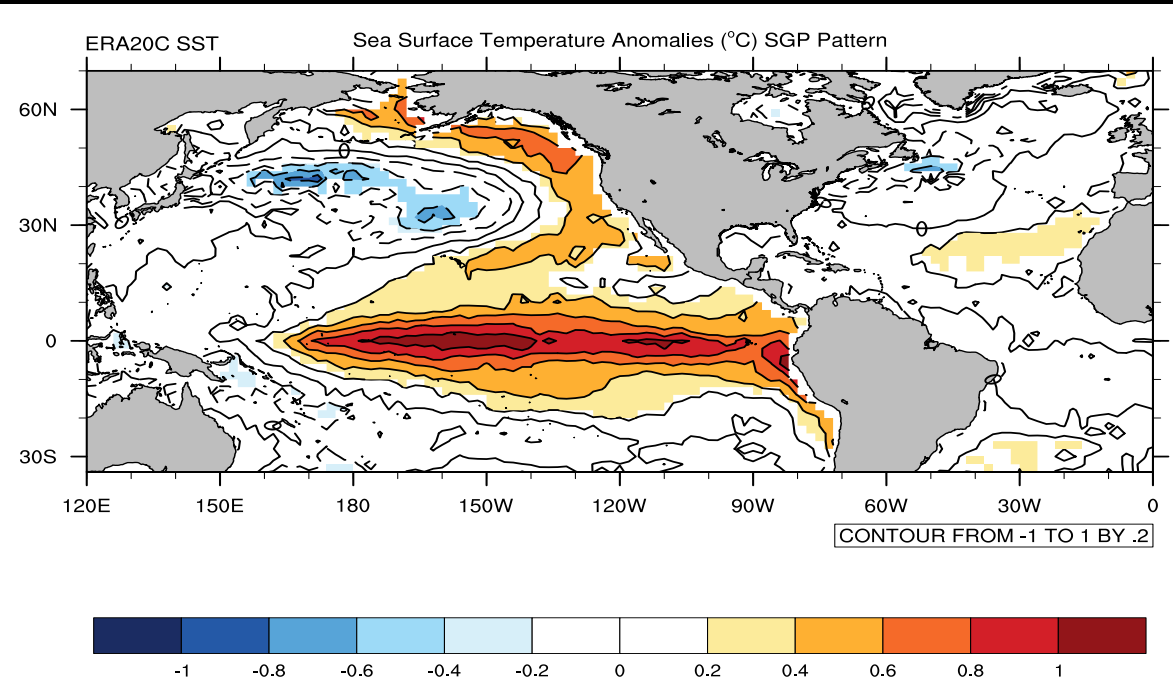

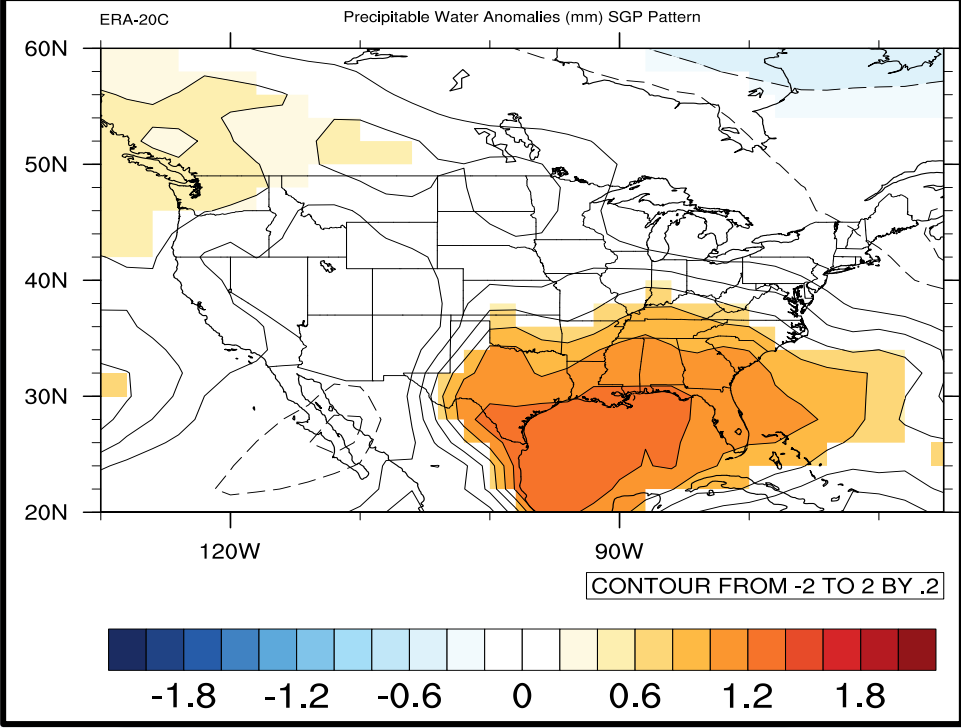

$v$  (north/south) wind component

Couplets show wave features that distort the mean flow

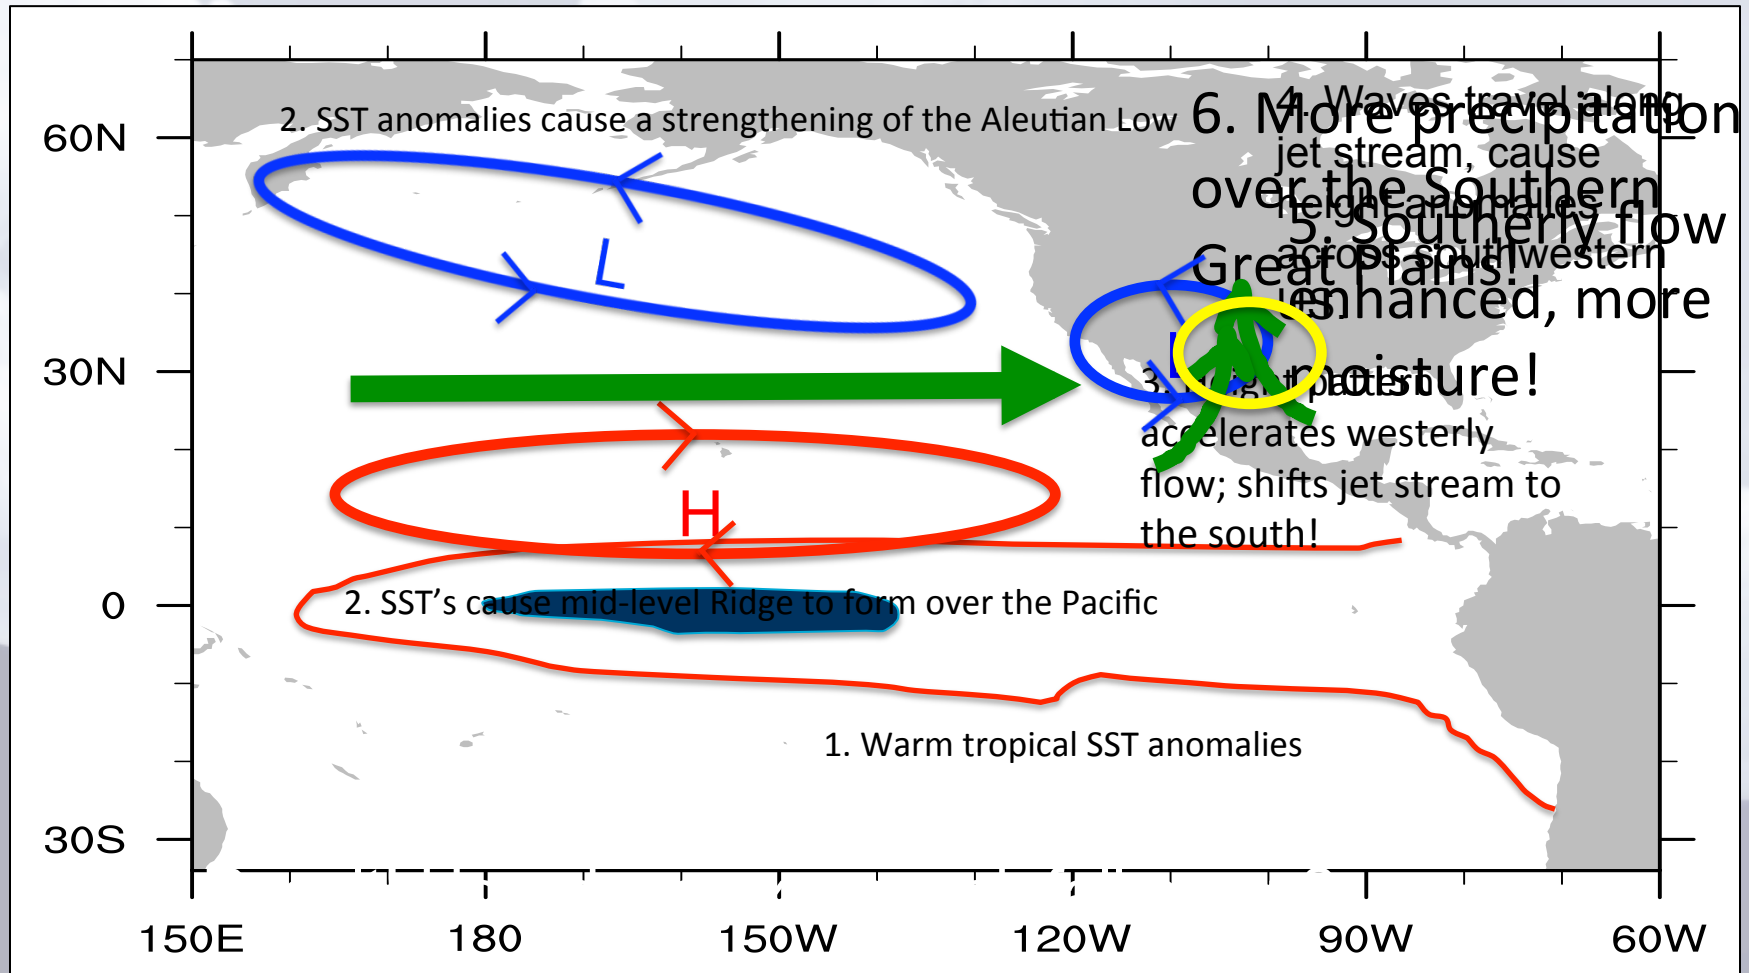

# Precipitable Water Anomalies

# Sea Surface Temperature Anomalies

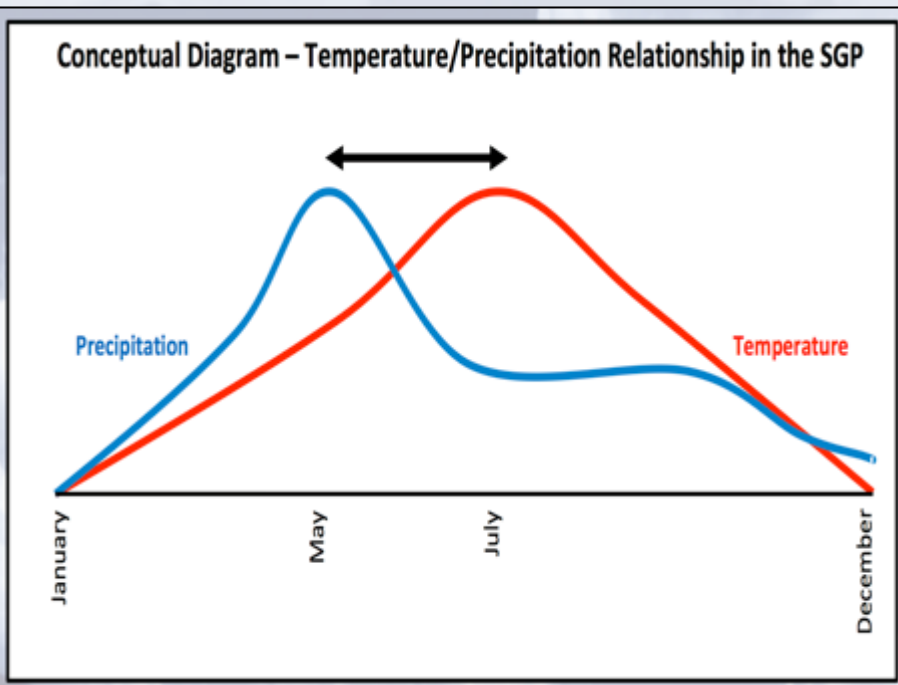

These fields represent the mean state of the atmosphere during pluvial events, not the day to day weather pattern!

# Southern Great Plains Hydroclimate: Importance of water resources

The Great Plains is an area with extensive agriculture practices (Fisher et al. 2007)

- ▶ Hence water is an extremely precious commodity!

Concept from Flanagan et al. 2018

Illston et al. 2004

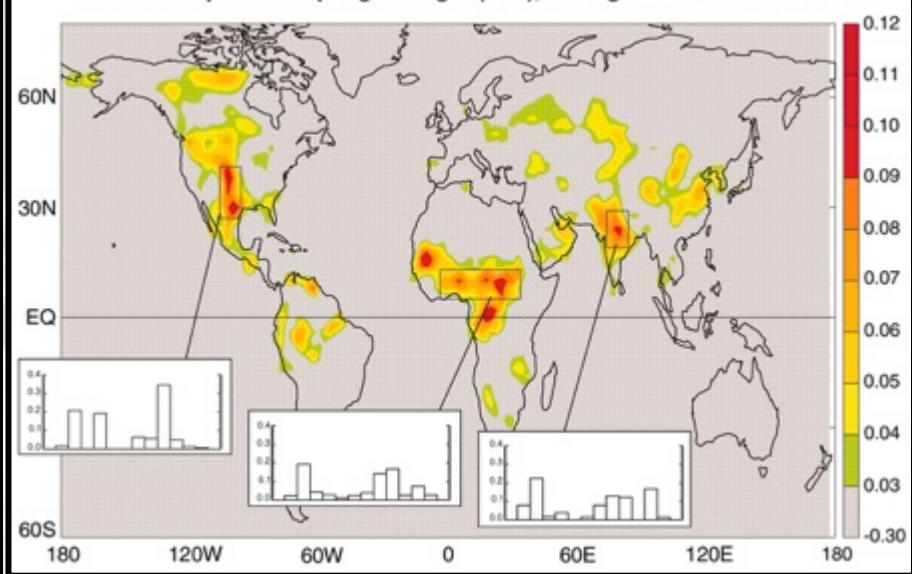

Flanagan, P. X., J. B. Basara, and X. Xiao, 2017: Long-term analysis of the asynchronicity between temperature and precipitation maxima in the United States Great Plains. *International Journal of Climatology*, **37**, 3919-3933.

**The overall variability is increasing.**

Land-atmosphere coupling strength (JJA), averaged across AGCMs

(Koster et al. 2004)

FIG. 3. Land-atmosphere coupling strength  $\Omega_L(S) - \Omega_L(W)$  over North America for the 25 yr from (top left) 1982 to (bottom right) 2006.

Guo and Dirmeyer (2013)

## Land-Atmosphere Interactions are a Critical Component of the Hydroclimate

Critical to feedback processes that enhance:

- Precipitation Recycling
- Intensification and Perpetuation of Drought

Basara and Christian (2018)

# Vegetation Change at the MOISST Site During the 2012 “Flash” Drought

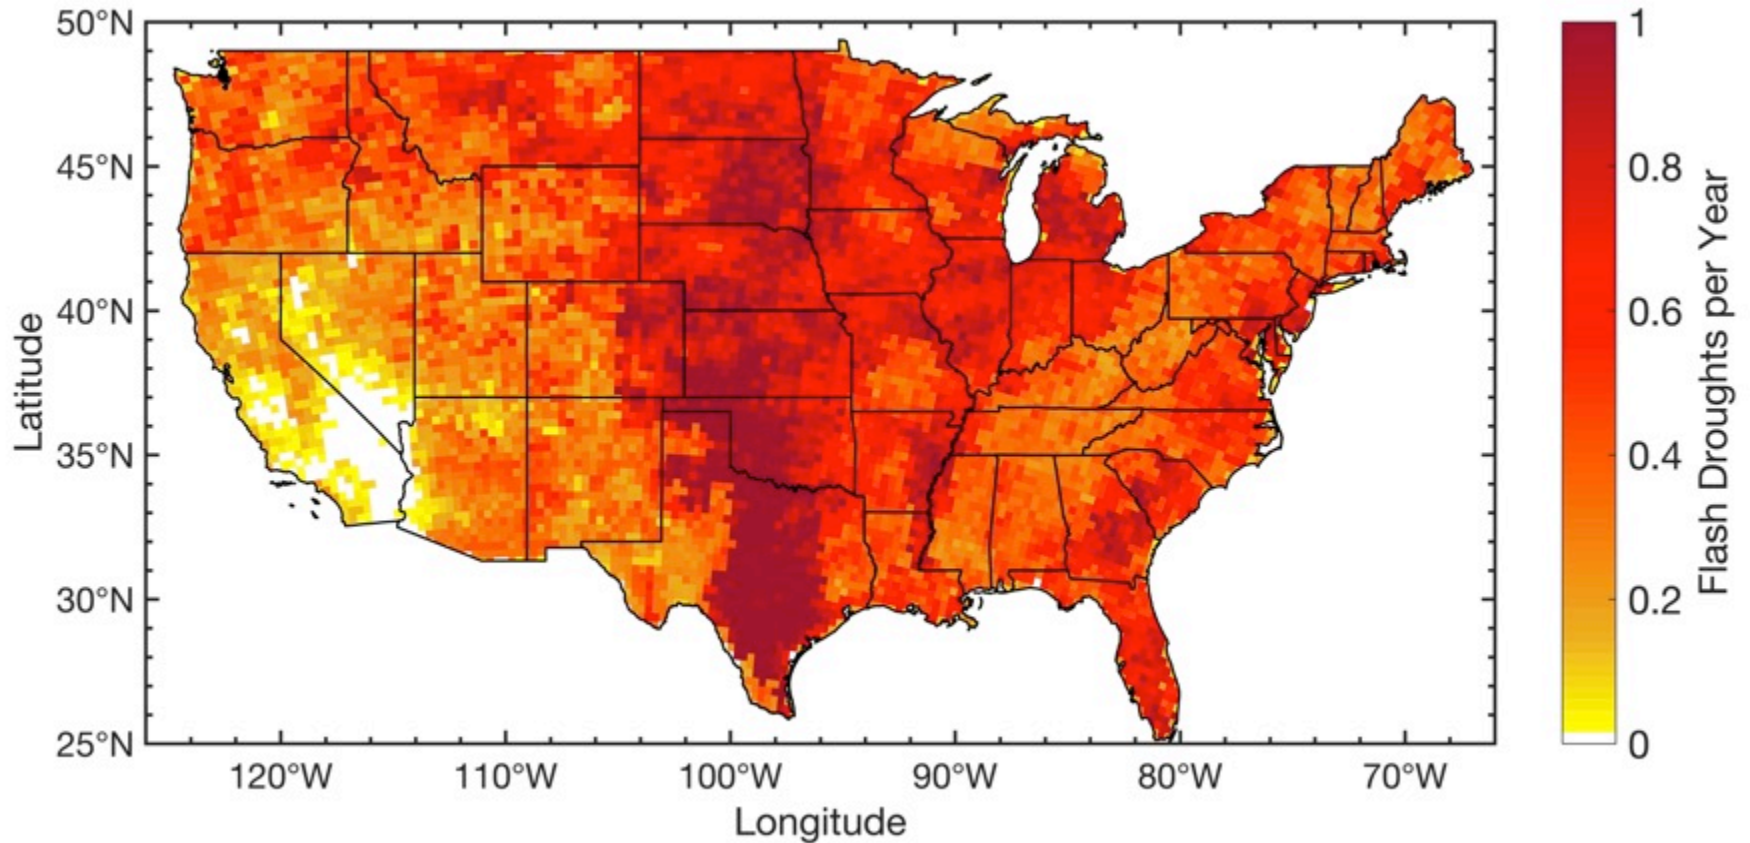

**July 1, 2012**

**August 13, 2012**

# Climatological Analysis of Flash Droughts

Otkin, J.A., M. Svoboda, E.D. Hunt, T.W. Ford, M.C. Anderson, C. Hain, and J.B. Basara, 2018: Flash Droughts: A Review and Assessment of the Challenges Imposed by Rapid Onset Droughts in the United States. *Bulletin of the American Meteorological Society*, doi.org/10.1175/BAMS-D-17-0149.1.

# Take-Away Message

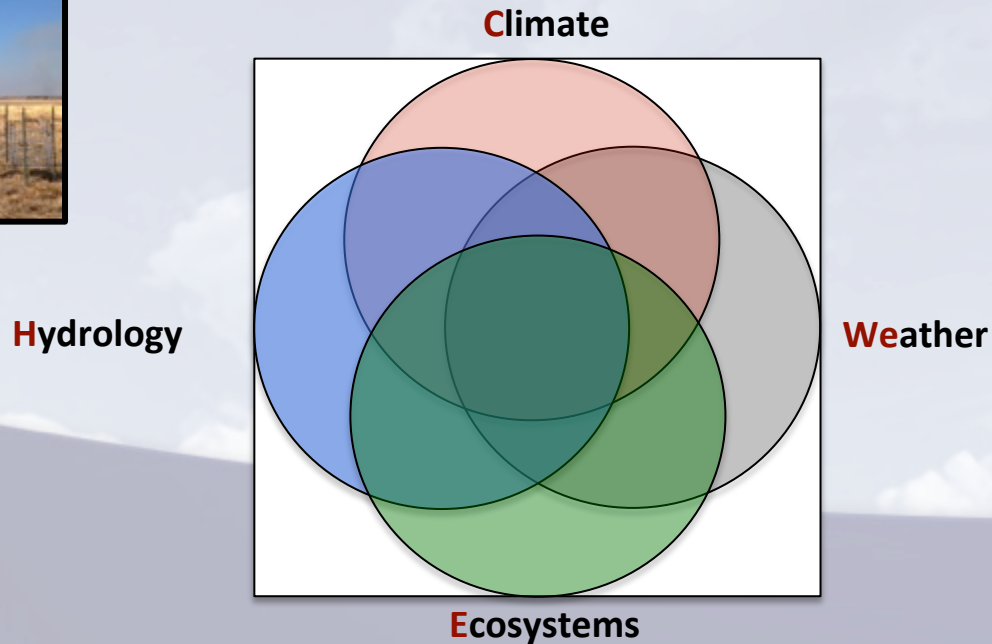

- The Great Plains domain is a region defined by dynamic weather/climate variability – includes subseasonal to seasonal extremes.
- Precipitation “variability” is increasing , especially the temporal aspect – Process “variability” is increasing.
- The results of the increase in precipitation variability is that:
  - Increased frequency in the oscillations between drought/pluvial periods,
  - Impacts the asynchronicity between the annual peaks in temperature and precipitation,
  - Along with local coupling, may be impacting the generation of flash drought conditions,
  - “Driven” by to local to global processes.
- Impacts span many local socioeconomic sectors ... especially agriculture.
- Much work to be done ... Additional Drivers? Predictability? Projections?
