

# Assessment of Near 0°C Temperature and Precipitation Characteristics across Canada

*Eva Mekis<sup>1</sup>, Ronald Stewart<sup>2</sup>, Barrie Bonsal<sup>3</sup>,  
Bohdan Kochtubajda<sup>4</sup> and Julie Theriault<sup>5</sup>*

1 - Environment and Climate Change Canada, Toronto; 2- University of Manitoba, Winnipeg;  
3 - Environment and Climate Change Canada, Saskatoon; 4 - Environment and Climate Change Canada, Edmonton;  
5 - University of Quebec at Montreal, Montreal

# Hourly Temperature Distribution

Winnipeg  
1953 - 2012

**IMPORTANT**

## Rationale and Objective

Surprisingly, relatively little analysis has been conducted on this issue from a broad perspective, including over Canada

So, our objective is:

To develop a Canada-wide perspective on near 0°C conditions with a particular focus on its associated precipitation

# Datasets

## Surface:

Environment and Climate Change Canada hourly reporting stations  
Dry bulb temperature, moisture, precipitation occurrence/type

## Issues:

Period of record  
Manual versus automatic observations  
Site location changes  
Merging information from nearby sites  
Precipitation measurement

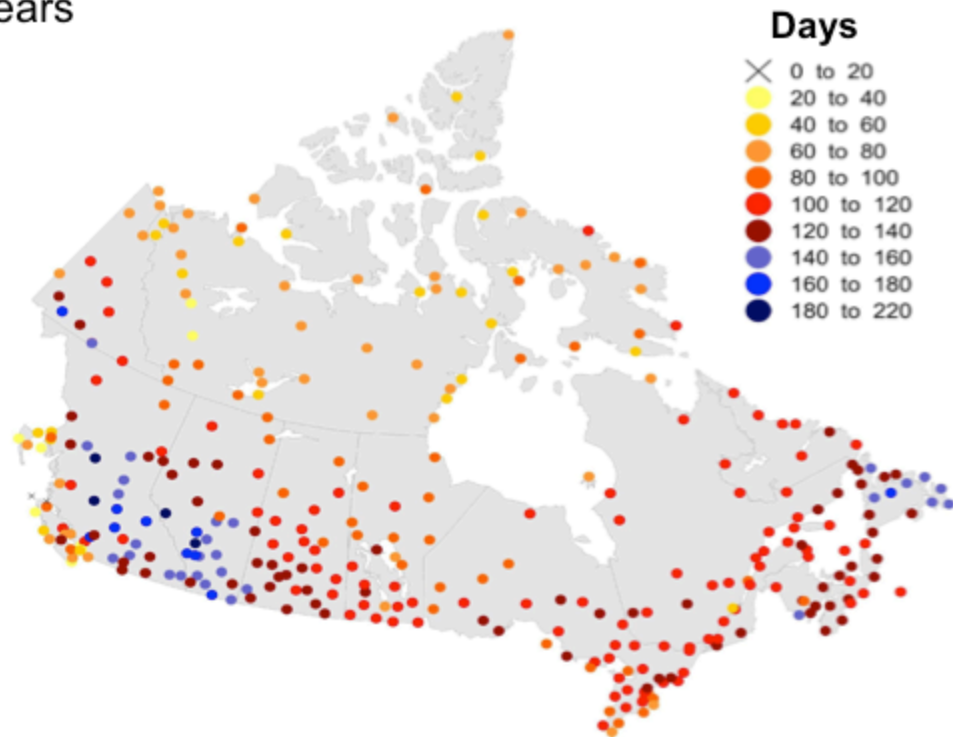

## Datasets:

For 'climatology' 1981-2015 with at least 25 years of data  
343 hourly reporting stations and 227 with weather type information

# Average Annual Number of Days with near 0°C Conditions

Period: 1981 – 2015, minimum 25 years

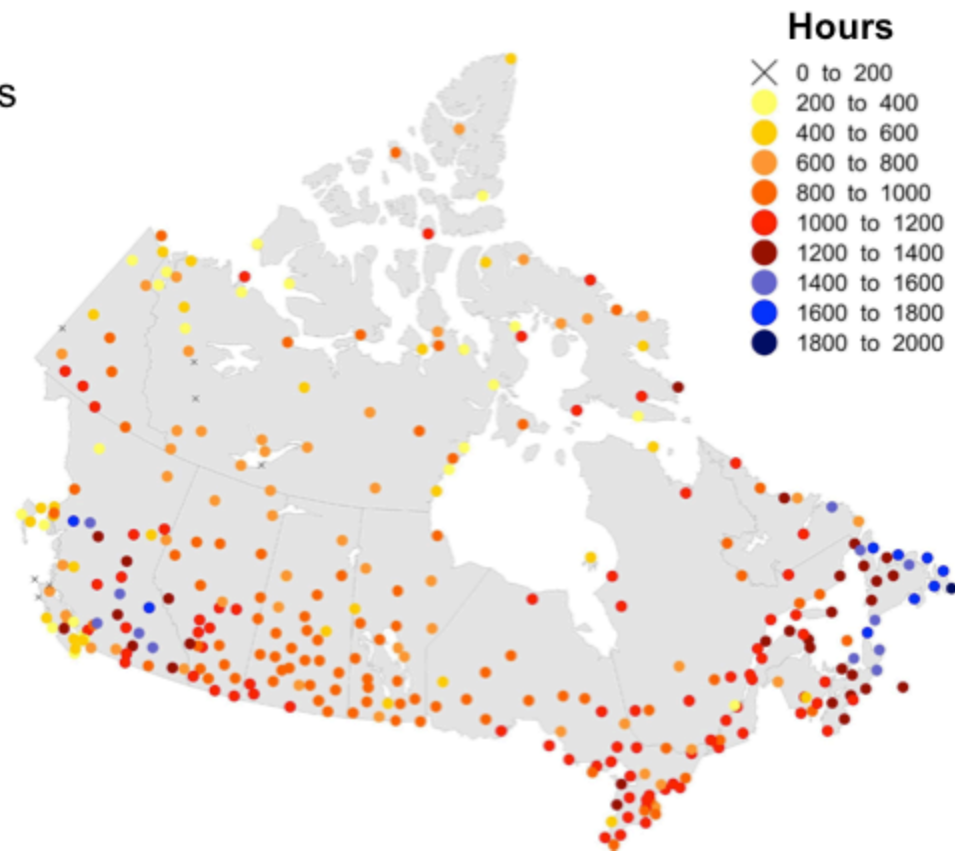

$$-2^{\circ}\text{C} \leq T \leq 2^{\circ}\text{C}$$

# Average Annual Period of Time Near 0°C (h)

Period: 1981 – 2015, minimum 25 years

$$-2^{\circ}\text{C} \leq T \leq 2^{\circ}\text{C}$$

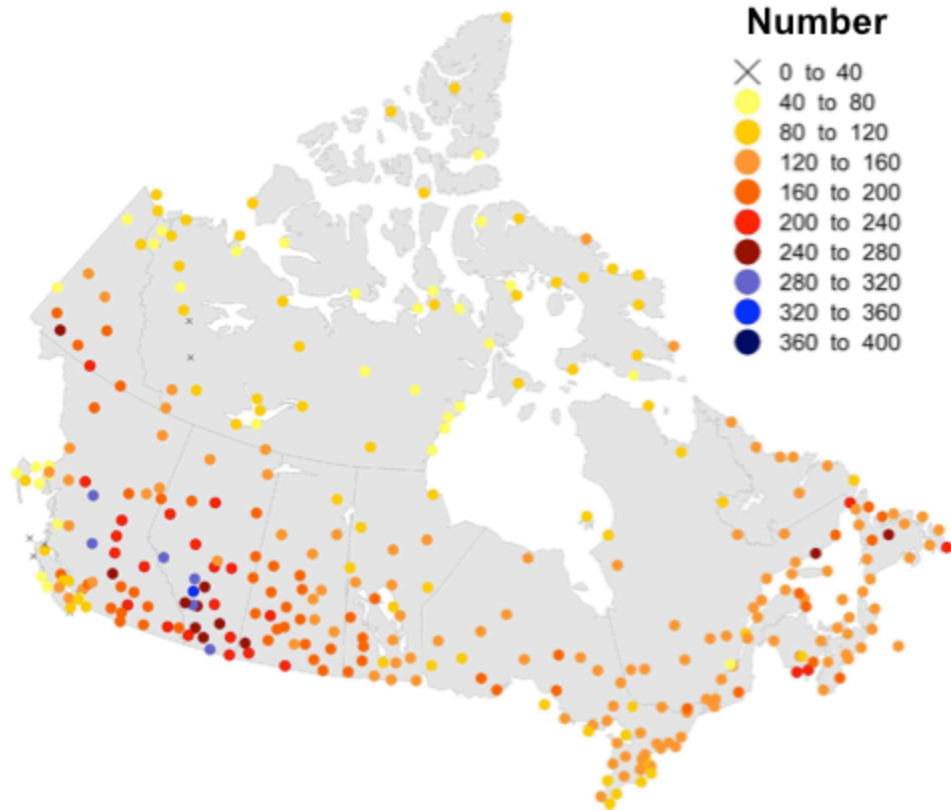

# Average Annual Number of Events near 0°C

Period: 1981 – 2015, minimum 25 years

$$-2^{\circ}\text{C} \leq T \leq 2^{\circ}\text{C}$$

Event - a period with continuous temperatures within the temperature threshold boundaries

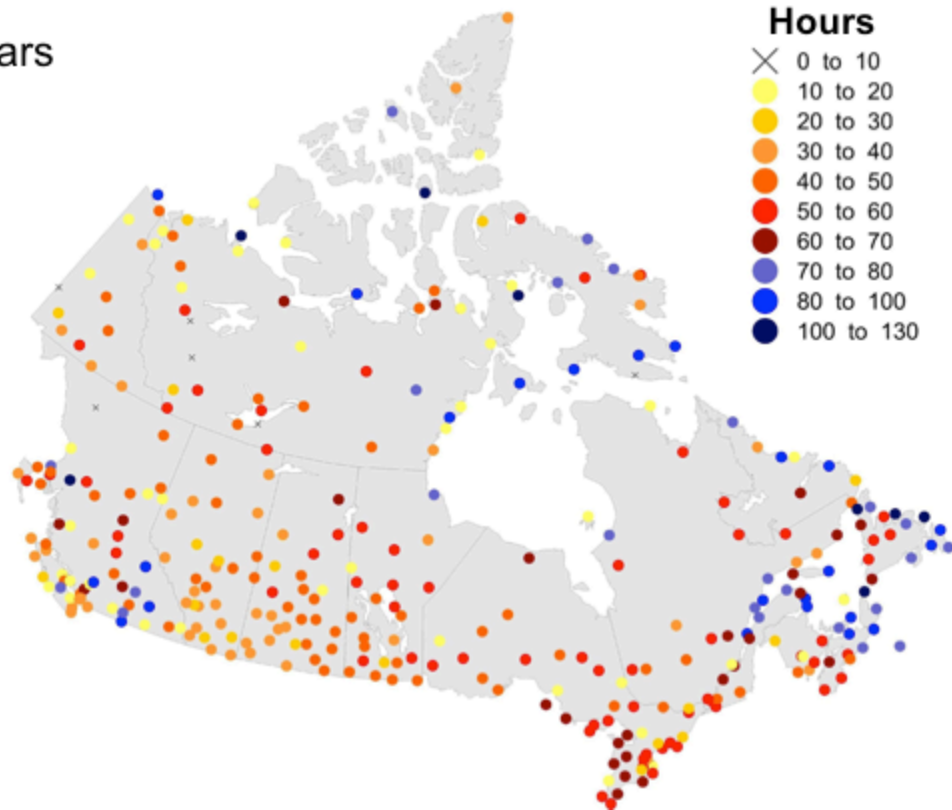

# Maximum Duration of Events near 0°C (h)

Period: 1981 – 2015, minimum 25 years

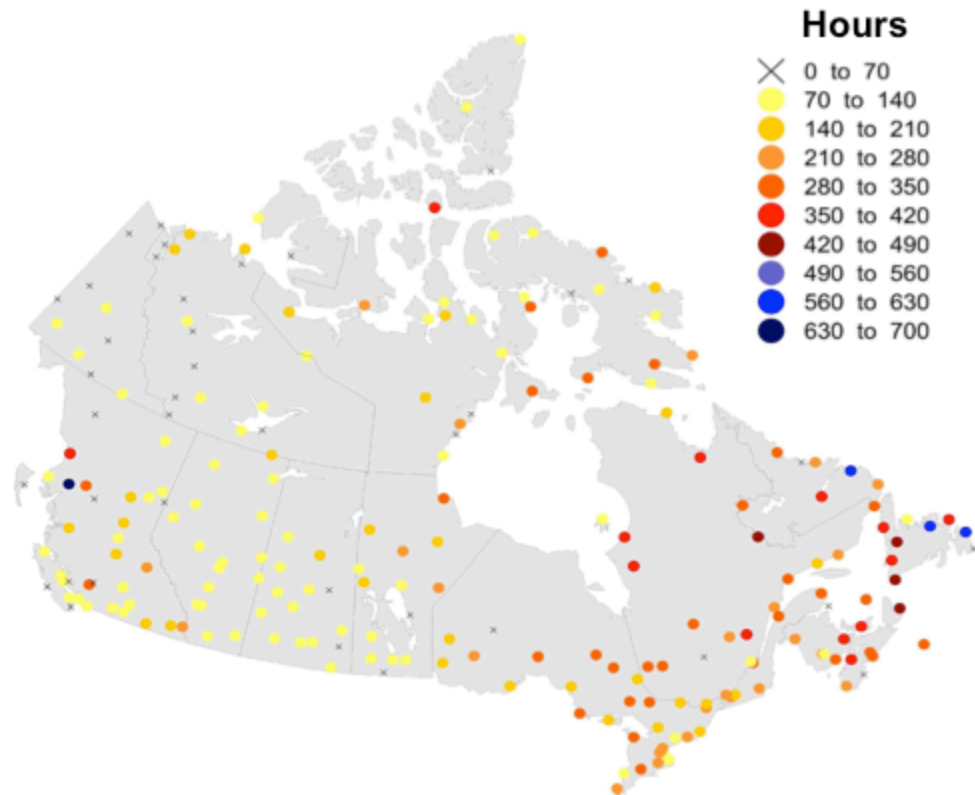

$$-2^{\circ}\text{C} \leq T \leq 2^{\circ}\text{C}$$

# Average Annual Precipitation Hours near 0°C: based of 12 weather type hourly observations

$$-2^{\circ}\text{C} \leq T \leq 2^{\circ}\text{C}$$

86	Rain (R)	INT: [0 1 2 3]
87	Rain Showers (RW)	INT: [0 1 2 3]
88	Drizzle (L)	INT: [0 1 2 3]
89	Freezing Rain (ZR)	INT: [0 1 2 3]
90	Freezing Drizzle (ZL)	INT: [0 1 2 3]
91	Snow (S)	INT: [0 1 2 3]
92	Snow Grains (SG)	INT: [0 1 2 3]
93	Ice Crystals (IC)	INT: [0 1 2 3]
94	Ice Pellets (IP)	INT: [0 1 2 3]
95	Ice Pellet Showers (IPW)	INT: [0 1 2 3]
96	Snow Showers (SW)	INT: [0 1 2 3]
97	Snow Pellets (SP)	INT: [0 1 2 3]

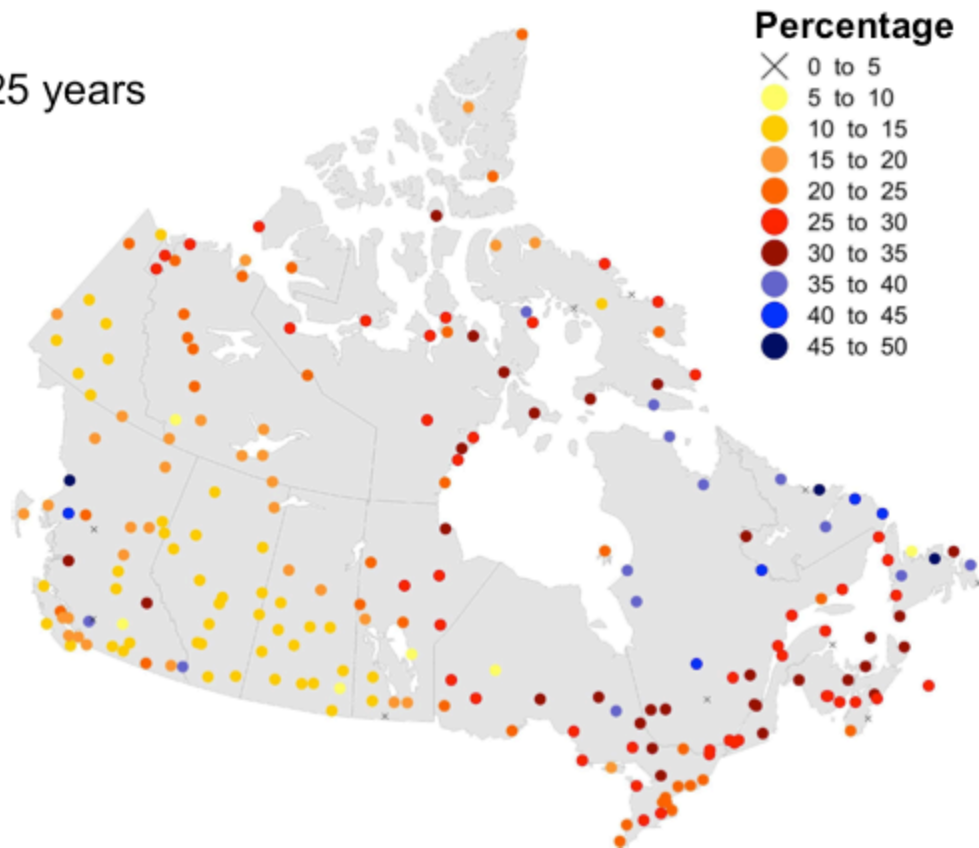

# Fraction of Near 0°C Conditions with Precipitation (%)

Period: 1981 – 2015, minimum 25 years

$$-2^{\circ}\text{C} \leq T \leq 2^{\circ}\text{C}$$

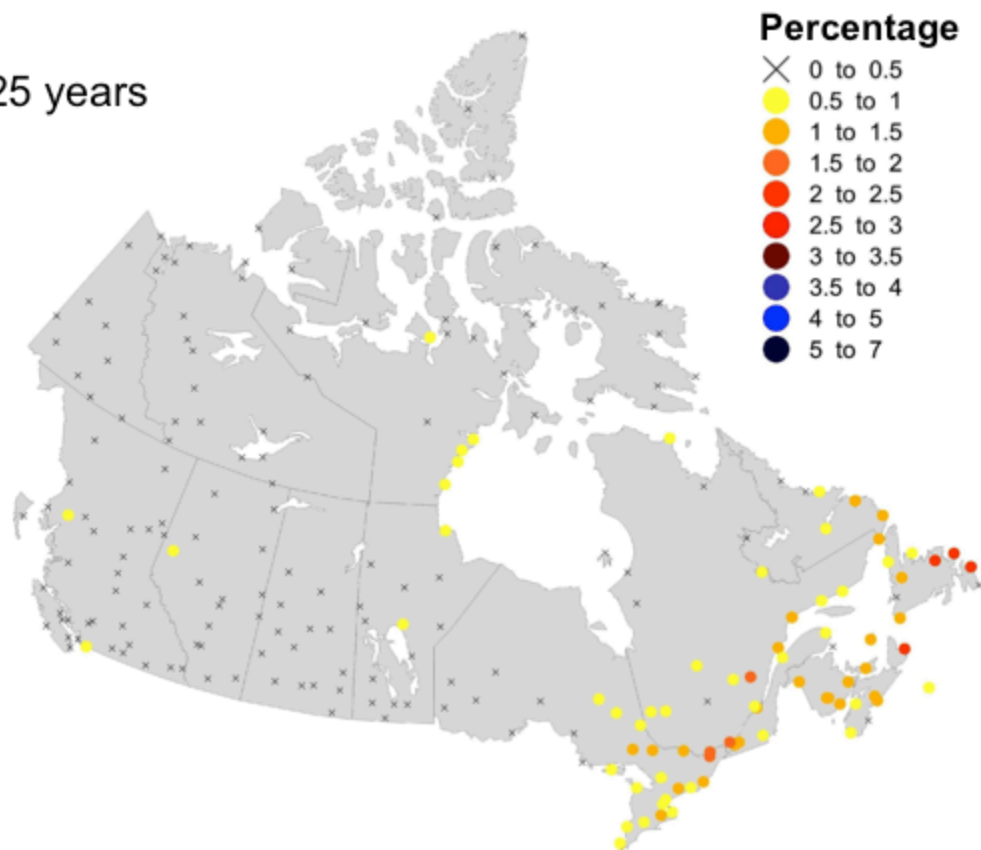

86	Rain (R)	INT: [0 1 2 3]
87	Rain Showers (RW)	INT: [0 1 2 3]
88	Drizzle (L)	INT: [0 1 2 3]
89	Freezing Rain (ZR)	INT: [0 1 2 3]
90	Freezing Drizzle (ZL)	INT: [0 1 2 3]
91	Snow (S)	INT: [0 1 2 3]
92	Snow Grains (SG)	INT: [0 1 2 3]
93	Ice Crystals (IC)	INT: [0 1 2 3]
94	Ice Pellets (IP)	INT: [0 1 2 3]
95	Ice Pellet Showers (IPW)	INT: [0 1 2 3]
96	Snow Showers (SW)	INT: [0 1 2 3]
97	Snow Pellets (SP)	INT: [0 1 2 3]

# Fraction of Near 0°C Conditions with Freezing Rain (%)

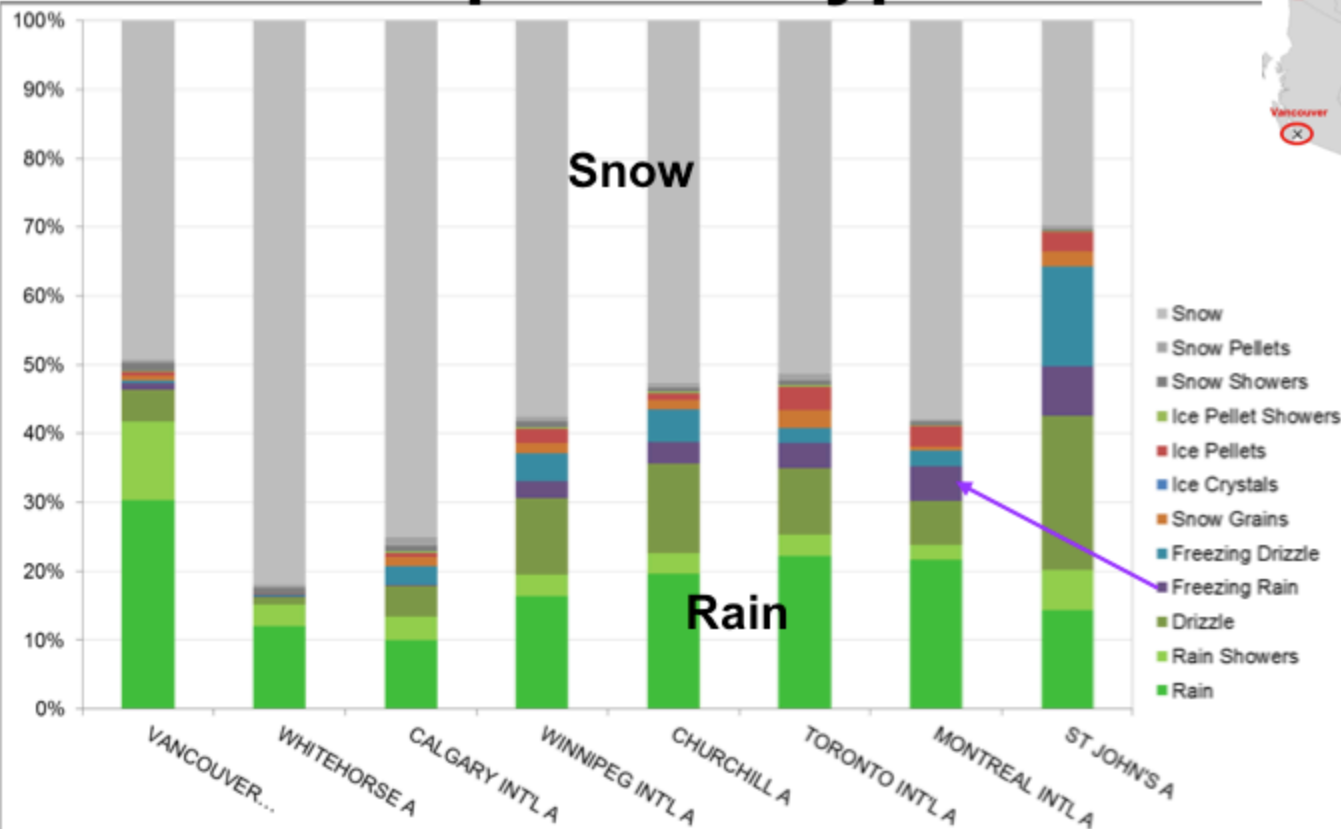

Period: 1981 – 2015, minimum 25 years

$$-2^{\circ}\text{C} \leq T \leq 2^{\circ}\text{C}$$

# Fractional Occurrence of Precipitation Types

Near 0 °C Case Study Locations

$-2^{\circ}\text{C} \leq T \leq 2^{\circ}\text{C}$

# Winnipeg

Temperature  $\leq \pm 2^{\circ}\text{C}$ :

Occurrences

Top 5% in duration

Precipitation

# Temperatures Near 0°C

**And: No significant  
increase in freezing rain**

## Concluding Remarks

An assessment of critical near 0°C conditions across Canada is being carried out:  
important for freeze/thaw, hazards

Several points can be made:

The country is characterized by highly variable near 0°C features  
occurrences, events, duration, patterns

Associated precipitation is often critical but highly variable  
occurrences, types, patterns

Future conditions need to be better addressed  
build on solid foundation
